- (54) Title: PROCESS FOR PRODUCING TRIARYLSULFONIUM SALT
- (54) 発明の名称: トリアリールスルホニウム塩の製造法

$$\mathbb{R}^{1} \xrightarrow{\mathbb{I}} \mathbb{R}^{1} \qquad [1]$$

(57) Abstract: A process by which a triarylsulfonium salt in which only one aromatic ring differs from the others can be efficiently produced. The process, which is for producing a triarylsulfonium salt represented by the general formula [4]: (wherein R represents aryl optionally having a substituent different from R^1 ; and A_1 represents a strong-acid residue), is characterized by reacting a diaryl sulfoxide represented by the general formula [1]: with an aryl-Grignard reagent represented by the general formula [2]: RMgX (wherein X represents halogeno) in the presence of an activator having a high affinity for oxygen, the activator being used in an amount of 3 to 7.5 equivalents to the diaryl sulfoxide, and then reacting the reaction product with either a strong acid represented by the general formula [3]: HA₁ or a salt of the acid.
